

## Press Release

Fourstar Connections, Inc.

Release date: October 4, 2010

### **Fourstar Connections acquires a modern manufacturing facility**

Hudson, MA, October 4, 2010 – Fourstar Connections, Inc. is a contract manufacturing organization servicing OEMs throughout North America. Their core competency includes; custom cable assemblies, mechanical sub assemblies and turn-key box build assembly. Today they announced the acquisition of a modern manufacturing facility and the successful move of operations to One Robert Bonazzoli Avenue in Hudson Massachusetts.

Fourstar Connections transitioned manufacturing operations during a four day window to the new plant with no interruption to customer deliveries. “The move went extremely smooth. We had access to the new facility 30 days prior to the move date. This enabled us to build out and move non-essential materials over a 2-4 week period. In the end, planning, communication with our customers and execution by the team contributed to the success of the move.” said Dave Pechnik VP of Operations.

The new facility is central to both their employees and the customer base. The building layout offers better work flow and supports their LEAN manufacturing initiatives. All the work benches are on wheels, all the lighting is up high, and all the power drops are either flex drops or are retractable. There is added parking for the employees (120 total spaces) and growth potential (5 acres of land with a site-approval for an additional 20,000 sq. ft. building addition). Phil Holman President /Owner of Fourstar Connections, Inc. states, “The newer modern facility offers efficiency improvements, customer expansion, and a superior working environment along with lower over head cost. We believe this makes us a more attractive manufacturing partner to our current and target OEMs in the medical, government and industrial markets. “
